

## Our good neighbour policy

**Ecotricity only builds wind projects where we can be certain they will be good neighbours, for people and for wildlife – for the entire lifetime of each project.**

This means designing wind parks to avoid noise or shadow flicker problems for people living nearby and to avoid harm to local wildlife. Our belief is that if wind energy is to succeed it needs to be sustainable in all senses of the word.

### **Good by design**

We deliver on our good neighbour policy through our dedicated team of wind experts who ensure good wind park design from the outset. And we use the best wind turbine technology money can buy and always have.

### **Taking responsibility**

We build our wind parks ourselves, taking the same care as we do in the design stage. And we operate them ourselves undertaking maintenance and repair work with our own team of engineers - for the entire lifetime of our wind parks - of up to 30 years. Ensuring we deliver on our promises to our neighbours and being just a phone call away.

### **Promises kept**

We've been building and operating our own wind parks, the length and breadth of the country, for well over ten years now. Each one of our wind parks is a promise kept, a Good Neighbour promise – that's something we take great pride in.

### **Our Mission**

Ecotricity exists to bring about environmental improvement by changing the way electricity is made and used in the UK, this goal is at the heart of the company and is the root of all the things we do.

**ecotricity**
