

Smart meter Instructions

ecotricity

What is a smart meter?

Smart meters are energy meters for the 21st century. They can help you keep better track of the energy you use and give you all the information you need to reduce your energy usage and save money on your bills.

With smart meters, you can manage your energy use better, pay your bills more easily, and you won't have to give us a meter reading again either. If you're on Pay As You Go, you can even top up from the comfort of your own home.

You also get an In-Home Display (IHD), which lets you do lots of useful things like see how much energy you have used, check your balance, and set up alerts.

Your smart meter guide

This guide will tell you all you need to know about how to use your smart meter and your In-Home Display.

The first section takes you through how to use your In-Home Display. This is the bit of kit that lets you do all the smart stuff like check your balance and set up alerts. The second section outlines some of the useful things to know about the actual smart meter itself – just in case anything goes wrong. Finally, the third section runs through some FAQs you may have about smart meters.

Overview of the monitor and the Home screen

The left of the screen shows the current rate of electricity consumption. As appliances and lights are switched on and off, the dial needle will move.

Press to enter the menu whilst on **Home** screen. Press to return to **Home**.

Use the **<** **>** buttons to navigate around the screen.

The LED at the bottom of the monitor shows your electricity usage (GREEN for low, AMBER for medium or RED for high) or BLUE if you only have gas.

The title of the screen shown and the current time.

Use arrow buttons to move between **Now**, **Today** and **Prepay** (if applicable) tabs.

The flame shows the recent rate of gas consumption (typically over the last 30 minutes).

Press to return to previous screen.

Press to switch between **cost** or **energy consumption** whilst on **Home** screen.

If you only have a gas smart meter, then the electricity dial is not shown, and vice versa.

Useful things on your In-Home Display

The 'Energy now' screen

The Energy now screen is divided in two, with the left side showing current electricity consumption now and the right displaying gas consumption.

This is the default screen shown when the monitor has started up, when the **home** button has been pressed or when the monitor has not been used for a period of time.

Pressing the **O** button will change the values from being shown in cost as £/hr to power as kW.

Electricity

The dial on the left shows the current rate of electricity use for your home.

The dial is divided into three zones - green, amber and red. As the dial moves between the zones, the colour of the LED at the bottom of the display will change to match.

The current rate of consumption can be shown in cost as £/hr (default) or energy as kW.

Gas

The gas flame indicates the recent consumption rate of gas for your home. The usage readings are taken every half an hour.

As more gas is consumed, the blue flame will increase in size.

Because there are readings being taken every half hour, the flame shows recent gas consumption and may not show when gas is no longer being used.

The 'Energy today' screen

The **Energy today** screen shows the total consumption so far that day for electricity and gas.

If you have set a budget for each fuel type (see **Settings**), then the monitor will predict (based on previous consumption for the same day of the week) if the total consumption today will be within budget.

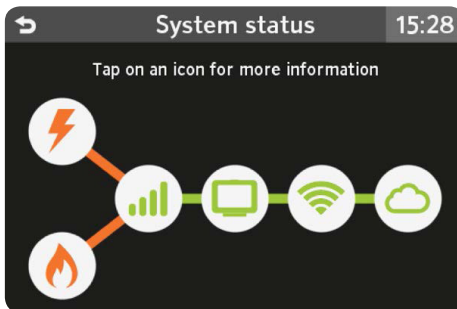

As energy is consumed, the small yellow dot (for electricity) and blue dot (for gas) will orbit around the budget prediction to show how much of the daily budget has been consumed so far that day - starting and ending at the bottom. The total cost shown includes any daily standing charges that form part of your tariff.

The budget prediction is green if you're predicted to be under budget. This turns amber if you're expected to be over budget and red if the budget has already been exceeded.

Press the **O** button to change between the total cost and how much energy you've used.

The budget can be set within the **Settings > Budgets** menu.

The 'System status' screen

This screen can be accessed via the **Menu**.

Use the **<>** buttons to select any of the icons and then **O** to view more information on the different parts of the smart metering system.

-  Status of the electricity meter
-  Status of the gas meter
-  Signal status between the IHD and the smart meters – this is also shown in the top left of the screen
-  This monitor (IHD)

If the optional wifi module has been fitted, then the following will also be shown:

-  Signal status to the local wifi network – this is also shown in the top left of the screen
-  Connection status to the cloud service

Messages

Inbox

We may send you messages via your smart meter(s). These will be shown in the **Inbox**.

When a new message is received you will also receive a notification on the screen and a sound. The notifications can be changed under **Settings > Sound & Alerts**.

If a message has not yet been read, it will be shown in bold and have a marker to the left.

Use the <> buttons to select a message. Press the  button to view the message in full.

Reading a message

Select Open from the options menu to read a message.

If the message is longer than the space available, use the < > buttons to view the rest of the message.

Some messages require confirmation or acceptance - use the < > buttons to switch between options and the O button to select.

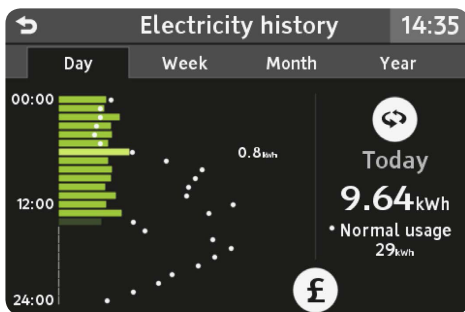

Deleting messages

You can delete a message by selecting **Delete** from the options menu.

The delete option will appear greyed out if the message requires confirmation or acceptance.

History screens

Electricity history

By selecting **Electricity usage** from the **Menu** screen, you can see your recent usage.

'Day' tab

The screen initially shows the current usage for today in energy (kWh), divided into the 24 hours of the day.

Each bar represents a one hour period and is shown in green. The lightest green bar shows the highest hourly period for today and the darkest green bar shows the current hour or incomplete period.

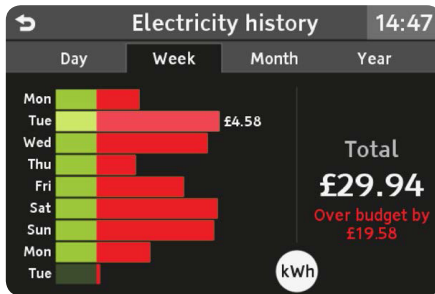

The highest hourly period (lighter green) will always display the usage for that hour. The figure is shown to the right of the bar (0.8kWh in the example shown above).

Pressing the 'w' button will change the values from being shown in cost as £/hr to energy as kW.

The total for today includes any daily standing charge. This means at midnight the total may be greater than £0.00, even if no electricity has been used. The bars exclude any daily standing charge.

'Week' tab

The 'Week' tab shows the electricity usage for the previous eight days.

If a budget has been set (see **Settings > Budget**), then when in cost view (£) the days when the budget was exceeded are shown with the extra cost highlighted in red.

'Month' tab

This shows the previous weeks in the same way as the 'Week' tab.

'Year' tab

The final view is the 'Year' tab, which shows the previous 13 months of usage. As with the 'Week' and 'Month' tabs, you can see months that were above and below your budget.

Gas history

The same historical views are available for gas consumption.

Seasonal adjustment

The budgets may be adjusted to take into account higher energy use during the winter months and lower energy use during the summer.

This can be disabled under **Settings > Budget**.

Settings

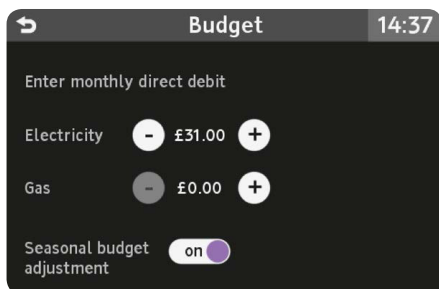

The Settings menu can be reached from the main Menu.

Use the <> buttons to change the setting selection and press  to view the selected setting.

Budget

Your In-Home Display has been designed to help you track your energy usage and meet the budgets you set.

Display

Use this screen to change the display settings for your In-Home Display. You can change the brightness, backlight, backlight timer and colour theme from here.

Sounds & Alerts

This menu option allows you to control the volume of any alerts you receive – for instance, if you are approaching your daily budget. You can also turn them off completely.

Your smart meter display

Display label

Describes characters on the main display

Supply

See if your energy supply is on or off

Display
This will show you figures such as your energy usage – or a message

PAYG indicator

This means Pay As You Go (or prepayment) mode is activated

Smart Pay As You Go

Pay As You Go (PAYG) mode lets you pay for your energy before you use it. You simply 'top up' your meter with credit. Being in PAYG mode allows you to manage your energy use on a daily basis – and, if necessary, it can help you to pay off any outstanding debt in affordable weekly amounts.

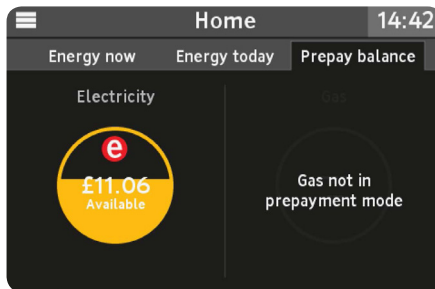

Topping up your smart meter

The first time you top up, you'll need your customer account number and your supply address. If you had credit or an outstanding balance on your old PAYG meter, then we will arrange to have the balance transferred within 48 hours of your installation. It's best that you run down any credit you have in the lead up to your installation.

With a smart meter, you no longer have to travel to the shop to top up your meter. You can do it all from the comfort of your own home. There are four main ways you can top up:

- Through our PAYG app which you can download through our website - ecotricity.co.uk/smartpayg. Our app is also available on the App Store or Google Play
- Through our website - smartpayg.ecotricity.co.uk
- By calling our 24 hour automated payment line on **0345 812 4444**
- If you aren't able to top up online or over the phone, you can top up at your local PayPoint outlet with our PAYG top up card.

'Prepay balance' screen

This screen is only shown if one or more prepayment meters are installed.

The **Prepay balance** screen shows the current available credit or the amount owed for prepayment meter(s).

Electricity is on the left and gas on the right if the two meters are installed. Otherwise the balance is shown in the centre.

The circle indicates the credit available and will appear full when above £20.

You can change the level at which you'll be notified that your credit is running low under **Settings > Advanced > Low credit** setting.

If the grey **e** symbol is shown, you can activate your emergency credit by pressing **t > Prepay > Activate emergency credit**.

A green **e** symbol is shown when you have activated emergency credit but not used it yet.

A red **e** symbol is shown when emergency credit is already in use

Moving home?

Please leave your In-Home Display behind as this is linked to your meters. If you're in Pay As You Go mode, make sure to run down your credit before you leave. You can let us know you're moving by giving us a call on **0345 555 7 500** or on our website at ecotricity.co.uk/customer-service/moving-home.

Useful information

- We've included an Energy Saving Advice leaflet in this pack and the engineer will also offer further advice during your meter exchange appointment. If you'd like more information on energy efficiency you can visit energysavingstrust.co.uk or call **0300 123 1234**.
- If you have micro-generation in your home such as solar panels, please let us know so we can make sure everything is set up correctly to work with your new meter.
- Please complete any necessary internal work before your appointment – we'll need safe and clear access to the meter, the fuse box and the mains cut-out switch to the property. The mains cut-out switch is located on the incoming supply. If you live in a flat or apartment within a larger building, the cut-out switch may not be located next to the meter. In this instance, please contact your managing agents to find out where it is.
- If either your gas or electricity is supplied by another provider, they'll be in touch to arrange a separate smart meter installation for this fuel.
- In the unlikely event that a fault occurs with your smart meters, we'll exchange or fix them free of charge.
- Similarly, if the In-Home Display was found to be faulty within 12 months of your installation this will be repaired or

replaced free of charge.

- Please get in touch if you'd like any of this information in another language, braille, audio transcription or large print.
- If there are any specific requirements that we need to know about before your meter installation please let us know.
- If you have any questions or would like to discuss any of this information, please call us on **0345 555 7 100** or email **home@ecotricity.co.uk**.

FAQs

Will a smart meter save me money?

It's not the meter that saves you money, it's how you use the information you'll get from the meter that will help you make savings. By using a smart meter to get control of what you're using, you can learn how to save energy – and potentially cut down your bills.

You'll get a clearer insight into how much energy different appliances use, and you can change your behaviour to make savings.

It's the small and easy changes that will see you save energy – things like only boiling a mug's worth of hot water if that's all you need. You might also turn off appliances overnight. And if you always use sunny days to line-dry your laundry, you'll see energy savings adding up.

I'm on Economy 7 - will my smart meter show me separate readings for my daytime and night time use?

Yes – to see your On Peak (Day Rate) and Off Peak (Night Rate) tariffs, you will need to press 6 on the keypad. You will then be able to scroll through the tariff registers. Your smart meter on peak times are 7am – midnight, and off-peak times are midnight – 7am.

Remember, you can also use your In-Home Display to check on your ongoing energy use at any time.

My energy has disconnected - what should I do?

Should your energy disconnect your meters will automatically be put into a state called "armed mode". This is a safety feature to avoid any damage to appliances and makes sure there is no gas on. You will need to do a couple of things – make sure that you have switched off any gas devices, like gas ovens or gas fireplaces, before you reconnect. You will also need to confirm

the reconnection on your In-Home Display or on your meter by following the prompts.

What should I do if I've lost my gas supply?

If you've got gas fires, a gas oven or a gas cooker as well as a gas boiler, check whether they're all off supply, or just the boiler. If it's just the boiler, check that the mains electricity switch is on and the pilot light is lit. If all your appliances are definitely off supply, please check your emergency control valve (ECV).

If the lever is in line with the pipe, it's 'open' and allowing gas to flow through. However, if it's at a right angle to the pipe, it's 'shut' and stopping gas from coming through. If so, you need to turn it until it's open. If your ECV is open and all your appliances are still off supply, please call us on **0345 555 7400** and we'll look into what's happened.

If just a few of your appliances are affected, the problem isn't in the smart meter, so you'll need to contact a gas safe engineer. You can find a list of registered gas safe engineers at gassaferegister.co.uk.

How often will a meter reading be taken?

We'll be able to view reads daily from the meter which will improve the accuracy of your bills.

If you'd prefer us to view your meter readings monthly instead, please contact us.

What if I have poor mobile phone signal in my area?

Smart meters use mobile phone signals to communicate. They're able to operate even with low signal and use multiple networks, so they can usually still work even if you get poor mobile phone signal in your home. However, as the signal varies your meter may sometimes struggle to communicate. This means we may not always receive the automated meter reading from your meter, or your PAYG top ups might not always be added to your meter straight away. You can help by not storing metal objects such as ironing boards in front of your meter, as this can block the signal. If you are experiencing long term signal issues we'll be in touch to let you know, as we may need you to give us a meter read if your meter can't.

What happens if I move house?

It's important that you tell us that you're moving. Please leave your In-Home Display for the next occupier to use. It's paired to your meter so wouldn't work in your new home.

PAYG FAQs

What are the minimum and maximum top up amounts?

You can top up between £2 and £99 each time.

Can anyone else top up my gas or electricity for me?

Yes, a guest can top up for you using your eight-digit customer account number. They'll need to know which meter you want to top up and also a valid billing address for their payment card.

What payment cards can I use to top up?

You can use Visa Credit and Debit Cards, Maestro Debit Cards and MasterCard Credit Cards.

How do I know what my current credit or debt balance is?

You can see your balance on your meters and on the In-Home Display - see page 9 for more details.

Why is my credit lower than my top up amount?

This is because you'll have topped up from a position of debt, so the debt will be subtracted from however much you top up.

Smart meter data - a guide to your rights and choices

The key facts

- Smart meters are being offered to every household in Britain between now and 2020. Your energy supplier will tell you when they plan to install your smart meter between now and then.
- The government is overseeing the rollout of smart meters and has set out the rules for the management and use of data collected from your smart meters.
- Your energy supplier will continue to hold your personal details on your account.
- Smart meters record more information than current gas and electricity meters. They will store the amount of energy you have used in each 30 minute period.

- Your energy supplier will collect meter readings remotely.
- You can choose how much of this information you share with your energy supplier.

You have several choices with a smart meter:

- How much data your energy supplier collects from your smart meter, e.g. monthly, daily or half-hourly meter reads.
- Whether your supplier shares details about your energy consumption with other organisations.
- Whether your supplier can use your meter reads for sales and marketing purposes.
- How you can access information about your energy use and get the most benefit from it.

Once you have made your choice on any of these, you can change your mind at any time.

If you do nothing, your supplier will continue to collect a daily meter reading.

For more details about this, or if you have any questions, please give us a call on **0345 555 7 100**.

For independent advice about your rights and choices relating to your personal information contact The Information Commissioner's Office at **ico.org.uk** or call the ICO Helpline on **0303 123 1113**.

The Smart Metering Installation Code of Practice (SMICoP)

The Smart Metering Installation Code of Practice specifies the minimum standards for members to follow in relation to the customer facing aspects of the installation of Smart Metering Systems.

The code aims to ensure customers have a positive experience during their meter installation, including getting all the information they need and protecting the customer during the installation process.

We hope you always receive a great service from us, however, if you want to make a complaint we have experts in every team who handle any customer issue or complaint. They have access to every department and every team member – at every level. If you have a problem they'll be in touch straight away, often the same day. Their job is to get to the bottom of the issue, find out

what went wrong and why – and resolve it promptly. They will give an impartial, factual account, communicated openly and honestly to you and us. And of course, they'll fix the problem, usually in just a few days.

To make a complaint you can give us a call on **0345 555 7 100** or email **home@ecotricity.co.uk**.

If you're a Micro Business, please call us on **0345 230 6102** or email us at **business@ecotricity.co.uk** so that we can ensure that you are being billed accurately.

If you smell gas:

- Switch the gas meter off by turning the emergency control valve vertically – if you're unsure how to do this call the National Gas Emergency Service on **0800 111 999**. They're open 24 hours a day.
- Open all windows and doors and keep them open until the leak is repaired.
- Call the National Gas Emergency Service on **0800 111 999**.
- Don't smoke or use electrical switches, and make sure there are no lit matches or naked flames .
- Make sure someone is available to provide access to the property when the emergency engineer arrives.
- Call the Fire Service on 999 if fire breaks out.
